ULTRA-EFFICIENT DEEP LEARNING IN SCALE-OUT SERVERS

In the new era of AI and intelligent machines, deep learning is shaping our world like no other computing model in history. Interactive speech, visual search, and video recommendations are a few of many AI-based services that we use every day.

Accuracy and responsiveness are key to user adoption for these services. As deep learning models increase in accuracy and complexity, CPUs are no longer capable of delivering a responsive user experience.

The NVIDIA Tesla P4 is powered by the revolutionary NVIDIA Pascal™ architecture and purpose-built to boost efficiency for scale-out servers running deep learning workloads, enabling smart responsive AI-based services. It slashes inference latency by 15X in any hyperscale infrastructure and provides an incredible 60X better energy efficiency than CPUs. This unlocks a new wave of AI services previously impossible due to latency limitations.

FEATURES

- Small form-factor, 50/75-Watt design fits any scale-out server.
- INT8 operations slash latency by 15X.
- Hardware-decode engine capable of transcoding and inferencing 35 HD video streams in real time.

SPECIFICATIONS

- GPU Architecture: NVIDIA Pascal™
- Single-Precision Performance: 5.5 TeraFLOPS*
- Integer Operations (INT8): 22 TOPS* (Tera-Operations per Second)
- GPU Memory: 8 GB
- Memory Bandwidth: 192 GB/s
- System Interface: Low-Profile PCI Express Form Factor
- Max Power: 50W/75W
- Enhanced Programmability: Yes
- ECC Protection: Yes
- Server-Optimized for Data Center Deployment: Yes
- Hardware-Accelerated Video Engine: 1x Decode Engine, 2x Encode Engine

* With Boost Clock Enabled

Reduce Application Latency by Over 15X

Achieve Over 60X the Inference Efficiency

Video Transcode and Inference on H.264 Streams

Reduce Application Latency in Milliseconds

Achieve Over 60X the Inference Efficiency in Images per Second per Watt

Video Transcode and Inference on H.264 Streams in Concurrent Streams
NVIDIA TESLA P4 ACCELERATOR FEATURES AND BENEFITS

The Tesla P4 is engineered to deliver real-time inference performance and enable smart user experiences in scale-out servers.

RESPONSIVE EXPERIENCE WITH REAL-TIME INFERENCE
Responsiveness is key to user engagement for services such as interactive speech, visual search, and video recommendations. As models increase in accuracy and complexity, CPUs are no longer capable of delivering a responsive user experience. The Tesla P4 delivers 22 TOPs of inference performance with INT8 operations to slash latency by 15X.

UNPRECEDENTED EFFICIENCY FOR LOW-POWER SCALE-OUT SERVERS
The Tesla P4's small form factor and 50W/75W power footprint design accelerates density-optimized, scale-out servers. It also provides an incredible 60X better energy efficiency than CPUs for deep learning inference workloads, letting hyperscale customers meet the exponential growth in demand for AI applications.

UNLOCK NEW AI-BASED VIDEO SERVICES WITH A DEDICATED DECODE ENGINE
Tesla P4 can transcode and infer up to 35 HD video streams in real-time, powered by a dedicated hardware-accelerated decode engine that works in parallel with the GPU doing inference. By integrating deep learning into the video pipeline, customers can offer smart, innovative video services to users which were previously impossible to do.

FASTER DEPLOYMENT WITH TensorRT AND DEEPSTREAM SDK
TensorRT is a library created for optimizing deep learning models for production deployment. It takes trained neural nets—usually in 32-bit or 16-bit data—and optimizes them for reduced precision INT8 operations. NVIDIA DeepStream SDK taps into the power of Pascal GPUs to simultaneously decode and analyze video streams.
